

TEACHING GUIDE

DETAILS OF THE SUBJECT

Title (of the subject): **BIOQUÍMICA**

Code: 101452

Degree/Master: **GRADO DE VETERINARIA**

Year: 1

Name of the module to which it belongs: FORMACIÓN BÁSICA COMÚN

Field: CIENCIAS BÁSICAS

Character: BASICA

Duration: SECOND TERM

ECTS Credits: 6

Classroom hours: 60

Face-to-face classroom percentage: 40%

Non-contact hours: 90

Online platform: E-learning platform from the University of Córdoba (<http://www3.uco.es/moodlemap/>)

TEACHER INFORMATION

Name: PRIETO ALAMO, MARIA JOSE (Coordinador)

Faculty: Edificio Severo Ochoa, 1ª planta, ala Este, C6E120

Department: BIOQUÍMICA Y BIOLOGÍA MOLECULAR

Area: BIOQUÍMICA Y BIOLOGÍA MOLECULAR

Office location: Edificio Severo Ochoa, 2ª planta, ala Norte, C62N100

E-Mail: bb2pralm@uco.es

Phone: 957218082

Name: DIEZ DAPENA, JESUS

Faculty: Edificio Severo Ochoa, 1ª planta, ala Este, C6E120

Department: BIOQUÍMICA Y BIOLOGÍA MOLECULAR

Area: BIOQUÍMICA Y BIOLOGÍA MOLECULAR

Office location: Edificio Severo Ochoa, 1ª planta, ala Este

E-Mail: bb1didaj@uco.es

Phone: 957211075

Name: GARCIA FERNANDEZ, JOSE MANUEL

Faculty: Edificio Severo Ochoa, 1ª planta, ala Este, C6E120

Department: BIOQUÍMICA Y BIOLOGÍA MOLECULAR

Area: BIOQUÍMICA Y BIOLOGÍA MOLECULAR

Office location: Edificio Severo Ochoa, 1ª planta, ala Este, C6E120

E-Mail: bb1gafej@uco.es

Phone: 957211075

Name: JURADO CARPIO, JUAN

Faculty: Edificio Severo Ochoa, 1ª planta, ala Este, C6E120

Department: BIOQUÍMICA Y BIOLOGÍA MOLECULAR

Area: BIOQUÍMICA Y BIOLOGÍA MOLECULAR

Office location: Edificio Severo Ochoa, 2ª planta, ala Norte, C62N100

REQUIREMENTS AND RECOMMENDATIONS

Prerequisites established in the study plan

No requirements

Recommendations

It is convenient for students of this subject to fulfill previously the subjects of Animal, Vegetal and Molecular Biochemistry, and Physics-Chemistry.

SKILLS

CE2

CE3

OBJECTIVES

The main objective of this subject is that students could achieve an integrated vision of biochemistry, which allows them to understand the molecular basis of life, to know the functioning of living organisms at this level, and to perceive their ability of response and adaptation to different physiological and/or environmental variables. More specifically, it is intended that students understand the common molecular logic that underlay the functioning of all living beings, and the differential aspects that lead to biodiversity. On the other hand, students should acquire an overview of some defects in these molecular processes that can lead to various diseases.

In addition students should develop the ability to understand, compare and relate concepts and apply them to a specific problem, as well as acquire skills in basic techniques in a biochemistry laboratory.

CONTENT

1. Theory contents

I. Proteins and enzymes.

1. Amino acids and peptides. Functions of proteins. Amino acids isomerism. Acid-base properties of amino acids. Kinds of amino acids: hydrophobic, non charged polar, acidic and basic. Derivative amino acids. UV light absorption. The peptide bond. Peptides of biological interest.

2. Proteins. Importance, conformation and structural levels. Secondary structure: alpha helix and beta sheet. Beta gyres. Tertiary structure: motifs and domains. Quaternary structure. Stabilizing interactions. Globular proteins: myoglobin (function, structure, O₂ binding) and hemoglobin (comparison to myoglobin, O₂ binding, cooperativity, Bohr effect, H⁺ and CO₂ transport, effect of 2,3-BPG). Collagen: supercoiled structure. Proteins involved in the control of gene expression: DNA binding structural motifs.

3. Enzymes. Nature and properties. Nomenclature and classification. Coenzymes and prosthetic groups. Mode of action of enzymes: bioenergetics of catalysis. Complex enzyme-substrate: active site, induced adjustment. Effect of temperature and pH. Clinical and biotechnological applications. Regulation of metabolic pathways. Regulation of enzymes. Allosteric enzymes: structural and kinetic properties. Covalent regulation. Proteolytic activation of zymogens. Isoenzymes.

II. Bioenergetics and metabolic integration.

4. Bioenergetics. Redox cycle of Biosphere. Energetic coupling. Basic thermodynamic concepts: ΔH , ΔS and ΔG . Quantification of ΔG . Relationship between ΔG , ΔE and K_{eq} . Energy transfer: activated intermediates and coupled reactions. Oxidation-reduction reactions. Free energy in a redox reaction.

5. Membranes and transport. Biomembranes: composition and structure. Membrane lipids: glycerophospholipids and sphingolipids. Transport

uco.es / grados

TEACHING GUIDE

mechanisms and kinetics. Types of transport. Mediated passive transport. Primary active transport: Na⁺/K⁺ bomb. Secondary active transport: use of ionic gradients to transport other molecules. Bioenergetics of transport.

6. Intercellular communication. Basic components of the intercellular communication. Signal molecules. Types of receptors: membrane and intracellular receptors. Membrane receptors linked to ionic channels. Membrane receptors linked to G protein. Second messengers: AMPC, Ca²⁺ and diacylglycerol. Intracellular receptors. Action mechanism of steroid hormones.

7. Introduction to metabolism. Krebs cycle. Global view of metabolism. Metabolic pathways: catabolism and anabolism. Regulation. Functions of the Krebs cycle. Formation and isomerization of citrate. Oxidative decarboxylation. Substrate-level phosphorylation. Regeneration of oxaloacetate. Energetic balance and regulation. Amphibolic character of the cycle. Anaplerotic reactions.

8. Respiratory chain and oxidative phosphorylation. Electron transport chain: complexes and transporter proteins. Structure and mechanism of ATP-synthase. Oxidative phosphorylation and respiratory control. Uncouplers and phosphorylation inhibitors. Chemiosmotic mechanism. Use of μH^+ energy from by mitochondria.

III. Carbohydrate metabolism.

9. Glycolysis, fate of pyruvate and gluconeogenesis. Global view of glycolysis. Phases: preparative (conversion of trioses-phosphate in glucose) and productive (oxidation-reduction of trioses-phosphate). Glycolytic utilization of other sugars and glycerol. Energetic balance of glycolysis. Pyruvate as a metabolic crossroad. Lactic and alcoholic fermentation. Oxidative decarboxylation of pyruvate: pyruvate dehydrogenase complex. Gluconeogenesis from pyruvate and other gluconeogenic substrates. Cori and alanine cycles.

10. Glycogen metabolism. Reserve polysaccharides (glycogen). Glycogen catabolism. Biosynthesis of glycogen. Glycogen phosphorylase and glycogen synthase.

11. Regulation of carbohydrate metabolism. Mutual regulation of glycolysis and gluconeogenesis: hexokinase, phosphofructokinase and pyruvate kinase. Regulation of the pyruvate dehydrogenase complex. Regulation of glycogen metabolism.

12. Pentose phosphate metabolism. Nature and goals of the pentose phosphate pathway. Oxidative pathway. Isomerization and interconversion reactions. Polyvalence of pathways.

IV. Lipids metabolism.

13. Triacylglycerols catabolism. Fatty acids and triacylglycerols. Fat reserves, lipolysis and regulation. Activation and penetration of fatty acids in mitochondria. Beta oxidation of fatty acids: enzymology, energetic balance. Beta oxidation of unsaturated and odd number of carbon atoms fatty acids. Ketone bodies metabolism.

14. Biosynthesis of fatty acids. Synthesis of malonil-CoA. Synthase of fatty acids. Elongation of palmitate. Establishment of fatty acids: essential fatty acids. Regulation of fatty acids synthesis. Biosynthesis of triacylglycerols and phospholipids.

15. Metabolism of steroids and lipoproteins. Synthesis of cholesterol from acetilCoA. Structure and function of lipoproteins. Synthesis of bile acids and steroid hormones.

V. Metabolism of nitrogen molecules.

16. Metabolism of amino acids. General view of proteins and amino acids metabolism. Transamination and oxidative deamination. Fate of N: glutamate dehydrogenase, differences between tissues. Fate of carbon skeletons: malic enzyme, degradative families, congenital mistakes. NH₄⁺ incorporation to carbon skeletons: glutamine synthetase and its regulation. Families in the biosynthesis of amino acids. Essential and non essential amino acids.

17. Nucleotide metabolism: Nitrogen bases, nucleosides and nucleotides. Biosynthesis of purine nucleotides. Purine bases recovery pathway. Regulation of purine nucleotides biosynthesis. Biosynthesis of pyrimidine nucleotides and its regulation. Interconversion of mono, di and tri-P nucleotides. Biosynthesis of deoxyribonucleotides and their regulation.

18. Nitrogen excretion. Origin and fate of NH₄⁺. Removal of NH₄⁺. Urea cycle: reactions, relationship with Krebs cycle. Removal of N from nitrogen bases.

19. Integration of metabolism. Basic principles of metabolism. Regulation of metabolic pathways. Main metabolic pathways of control points. Specialized metabolic functions of different organs. Metabolic fluxes as a function of the nutrition state.

In this activity will participate Antonio López Lozano, belonging to the Postdoctoral staff of the Dpt. of Biochemistry and Molecular Biology (University of Córdoba).

TEACHING GUIDE

2. Practical contents

CLASSROOM PRACTICES. In this activities will participate Guapalupe Gómez Baena, belonging to the Postdoctoral staff of the Dpt. of Biochemistry and Molecular Biology (University of Córdoba).

CP I. AMINO ACIDS AND PEPTIDES. Problems and questions on the acid-base properties of amino acids. Determination of pI and electrophoretic mobility of amino acids and peptides.

CP II. ENZYMATIC KINETICS. Problems and questions on the bioenergetics of enzymatic catalysis. Lineweaver-Burk equation: Km and Vmax calculation. Effect of inhibitors on the kinetic parameters.

CP III. BIOENERGETICS AND ENERGETIC METABOLISM. Problems and questions on basic thermodynamic concepts, difference of potential between two redox pairs, relationship between ΔG , ΔE , Keq, activated intermediaries and coupled reactions, Krebs cycle, respiratory chain and oxidative phosphorylation.

CP IV. TRANSPORT. Problems and questions on transport bioenergetics: Na⁺/K⁺, ATPase, Ca²⁺-ATPase and secondary active transport systems.

CP V. BIOMOLECULES METABOLISM. Problems and questions on carbohydrate, lipids and nitrogen biomolecules.

LABORATORY PRACTICES

LP1. Quantitative analysis of proteins by the Lowry method.

LP2. Quantitative analysis of glucose by the glucose oxidase method.

LP3. Kinetics of alkaline phosphatase in Escherichia coli. Effect of the reaction time. Determination of Vmax and Km.

LP4. Acid and enzymatic hydrolysis of glycogen.

METHODOLOGY

General clarifications on the methodology. (optional)

Each of the face-to-face activities will be approached as follows:

Theory academic sessions using the "Master class (lecture)" system. There are 19 themes which will be taught in classrooms to full groups, stimulating the participation through questions and dialogue with students. Presentations will be used, and they will be available for students in the moodle platform.

Academic sessions to solve numeric problems and practical cases related to metabolism: topics requiring biochemical calculations are explained, in order to allow students to solve quantitative problems, and realistic questions on different metabolic situations are posed. Related topics will be taught, asking for volunteers to solve problems in the blackboard. There will be problem collections with their solutions available in moodle.

Laboratory practices academic sessions: Laboratory practices (LP 1-4) introduce students in the methodologies used in Biochemistry, getting them familiar with the experimental procedures with different biomolecules. They will be taught in the Department laboratories (basement of the Severo Ochoa building). Protocols of practices will be available in moodle. It is compulsory to attend each practice with its protocol and a laboratory coat!

Bibliographic consultations: Several chapters will be read by each student along the course, in which they will study and understand topics selected by the teachers; They will be evaluated in the classroom through a series of written questions.

Methodological adaptations for part-time students and students with disabilities and special educational needs

Part-time students will be provided with the necessary information, in addition to the attention in the tutorial session timetable, to ensure that they will have all the resources required to pass the subject.

TEACHING GUIDE

Face-to-face activities

Activity	Large group	Medium group	Total
Assessment activities	3	-	3
Case study	-	11	11
Laboratory	-	10	10
Lectures	36	-	36
Total hours:	39	21	60

Not on-site activities

Activity	Total
Bibliographic consultations	9
Problems	21
Self-study	60
Total hours:	90

WORK MATERIALS FOR STUDENTS

Internship notebook - www3.uco.es/moodlemap/
 Exercises and problems - www3.uco.es/moodlemap/
 Manual of the subject - www3.uco.es/moodlemap/

EVALUATION

Skills	Tools		
	Final exam	Practical cases and examples	Reading tests
CE2	x	x	x
CE3	x	x	x
Total (100%)	68%	20%	12%
Minimum grade.(*)	4.5	5	4.5

(*): Minimum grade necessary to pass the subject

Method of assessment of attendance:

Se tendrá en cuenta la asistencia activa y participativa a las prácticas de aula y prácticas de laboratorio.

Active assistance and participation in classroom and laboratory practices will be taken into account in the final qualification.

General clarifications on instruments for evaluation:

A Final exam will be made on the date determined by the Faculty of Veterinary Medicine. In this exam the concepts taught in lectures and during classroom practices (case study) will be evaluated. It will be up to 68% of the total score of the subject.

Laboratory practices (Practical cases and examples): Each practice will be evaluated by the student's participation and the interest demonstrated during its execution. Laboratory practices will be also evaluated by the obtained results and by a test that will be made immediately after each practice. This qualification will be up to 20% of the total.

Reading tests (about bibliographic consultations) and classroom practices: The comprehension of the bibliographic consultations will be evaluated with written questions about each chapter. This activity can provide up to 6% of the final mark. The classroom practices will evaluate by participation and by the resolution of questionnaires. This section will be valued with 6% of the final mark.

In order to pass the subject, it is essential to obtain at least 45% of the final exam points, being all parts of the program compensated and it is also compulsory, to obtain 50% of the laboratory practice points. The score of the different activities will compute in the final mark only when the above mentioned requirements have been achieved and the minimum score required in each of the items reached. In order to pass the subject it is necessary to obtain a score equal to or greater than 5 points out of 10.

TEACHING GUIDE

Clarifications on the methodology for part-time students and students with disabilities and special educational needs:

Part-time students will follow the same evaluation system as the rest of students. Nevertheless, particular considerations of students with the formal consideration of part-time students will be taken into account.

Qualifying criteria for obtaining honors: Se asignará matrícula de Honor a los alumnos con las máximas puntuaciones, siempre que sean superiores a 9. El número de matrículas de honor dependerá del número de alumnos matriculados de acuerdo con el RRA.

General clarifications on the partial evaluations:

El examen parcial tendrá una puntuación que dependerá de la materia que incluya de acuerdo con la fecha que se fije para su realización, en coordinación con los parciales de las demás asignaturas del segundo cuatrimestre. De acuerdo con la puntuación global, se fijará la puntuación necesaria para eliminar materia. La calificación de este examen tendrá validez durante el curso en vigor, pero no se guardará para cursos posteriores.

COORDINATION CRITERIA

- Outputs Organization
- Performing activities

The methodological strategies and the evaluation system contemplated in this Teaching Guide will be adapted according to the needs presented by students with disabilities and special educational needs in the cases that are required.
