Pet Behaviour Science
2022, Vol. 12, 11 - 30
doi:10.21071/pbs.vi12.14035

Supplementary Material

Appendix I. Domestic dog ethogram adapted from Beerda (1998) and Tami & Gallagher (2009).

Posture	Description
High posture	Dog is in neutral conditions, with tail raised and/or head elevated, ears facing forward
Walk	Dog is standing and moves forward without pulling the leash
Sit/Lay	Dog is immobile with two (sit) or four limbs (lay) resting on the floor
Pull	Dog is standing and moves forward by pulling the leash
Rear	Dog supports one or both front legs in any structure, with rear paws touching the floor, upper body inclined or even vertical in relation to the floor; can vocalize
Ambivalent posture	Dog is in crouching posture OR high body posture accompanied by a below than usual tail; ears can be backwards
Avoid II	Dog gets distance from stimuli by pulling the leash or trying to walk backwards
Avoid III	Dog actively tries to fly or hide where possible
Low posture	Dog has low tail, back ears, and crouched legs

Behaviour	Description
Pant	Dog breathes with mouth open, gasping; with in or out tongue
Hypervigilant	Dog is constantly alert and attentive to environment, while sitting/standing or moving, with eyes wide open, dilated pupils, and constant activity of the head, ears, and nose
Lip licking	Dog's tongue quickly moves outside, along the lips and may reach nose
Paw lift	Paw lifts off the floor and keeps the forelimb hovering in the air
Yawning	Dog opens mouth, breathing a great amount of air with or without a high-pitched sound
Shake	Dog shakes head from side to side quickly and vigorously, extending this movement progressively throughout the body
Scratching	Dog rubs one or more parts of the body with one of its hind limbs
Bark	Dog opens mouth and emits a short, loud, deep, intense throaty sound which is repeated a variable number of times; it can be accompanied by a tail wag
Neutral behaviour	In any posture, dog remains immobile but active, looking attentively in any direction and responding promptly to any stimulus
Look owner	Dog looks at owner, once or repeatedly; may or may not lean its head against owner
Owner pet	Dog is stroked by the owner; it can be in any posture.
Ingest	Dog ingests water and/or food
Smell	Forced inhalation of air, repeated in rapid successions, through the nose
Interaction with object	Dog interacts, or tries to interact (chases), with an object; with or without vocalisations
Interaction humans/dogs	Dog interacts with humans/dogs in a positive way, in a friendly posture, while wagging its tail; may include the invitation to play posture
Avoid I	Dog diverts look / head / body from stimulus source
Scare	Dog winces or slightly jumps following a sudden event in the vicinity
Freeze	Dog remains in any immobile posture, does not reacting to any income stimuli

Appendix II. Generalised linear mixed-effects (GLMM) parameters for the analysis of dogs' postures and behaviours among different rooms (AB, ACC, DOI, EXP), observers (1-6) and training level (trained or not trained). Asterisk denotes group that is significantly different ($p < 0.05$) from AB Room, Observer 1, and/or untrained dogs.
